## World Wetlands Day 2<sup>nd</sup> February

We celebrated and learnt about how healthy wetlands help us cope with extreme

weather events. We learnt that we can all do our bit to help protect our wetlands by:

- Respecting any rules for visiting wetlands
- Never taking anything away
- Never leaving rubbish
- By using water sparingly
- By using eco-friendly products that will not poison, damage or harm the environment

Thanks to the Year One cake sales Goldfield has a wonderful new weather station. It has a compass, solar light, rain gauge, thermometer and a wind speed measure.

It has already been put to use to good use by the children in KS1 who have been collecting data to investigate the environment and how the weather impacts on it.

Thank you!

The children helped their feathery friends out by making fat balls. These were hung around the school and, judging by the number of birds that have been visiting us, they have

certainly been very much appreciated! Thank you to all the parents & Tring School students who

came and helped out with this mucky task!

## Thinking about our local

**environment:** Year Two have been very busy exploring our school environment during their autumn and winter Seasonal Change Days. Their next Seasonal Change Day (spring) will see them travel further afield to investigate a very special, local environment. More details will follow...

## We Need You!

Year One are developing their garden to help encourage more wildlife.

Reception are developing a new outdoor plan.

If you are able to donate any useful resources they would love to hear from you!

## Reduce, Reuse Recycle

Mrs Stevens would still like to collect your metal bottle tops (that have been carefully levered off). Please put them into the **Recycle Box** outside the school office. Thank you!

**“Waste less, Live more”**
